ICLAUD® Fe/Mn/Zn GS

WATER DISPERSIBLE GRANULES (WG)

DESCRIPTION

ICLAUD® Fe/Mn/Zn GS is an iron chlorosis and Zn and Mn lack fix fertilizer, that contains Fe, Zn and Mn quelates.

AUTHORIZED USES AND DOSE

. Fruit trees and citrus
Nurseries: 3-5 gr/ft
Seedling: 5-15 gr/ft
Young trees: 15-25 gr/ft
Trees in production: 25-50 gr/ft
Trees very developed and affected by iron chlorosis: 50-100 gr/ft

. Vine
Young stocks: 3-5 gr/ft
Stocks in production: 5-10 gr/ft
Vine: 10-25 gr/ft

. Vegetables and ornamentals
Beginning of development: 1-2 gr/m²
Full development: 2-5 gr/m²

APPLICATION TIMING

Fruit trees and vine: apply ICLAUD® Fe/Mn/Zn GS at the end of winter or beginning of spring, to coincide with the start of new shoot development.

Citrus and other perennial-leaf crops: make an application in spring or beginning of summer, before second shoot development.

USE

. Direct to soil:
Spread the product, mixed with fertilizer or sand or well pulverized, directly to soil. Water afterwards to incorporate the product in the root area of the plant.

. Holes or furrows:
Make holes (minimum 4) or a furrow of 15-20 cm depth around the trees or along the plantation line. Apply necessary dose diluted in water (approximately 80 gr in 10 L of water), close holes and water afterwards.

. Injection:

Apply the product with fertilizer distributors or using manual injectors. Several shots must be made along the tree or near dripping area, watering afterwards.

Apply the product, using a deposit connected to hollow grids cultivator, which allows placing the product in the bands of the plantation line.

. With irrigation water:

Add the product diluted with irrigation water, either by spray, drip or border irrigation. Thanks to its high solubility and the quality of the formulation, ICLAUD® Fe/Mn/Zn GS does not block nozzles. It is recommended not to dissolve the product in concentrations over 80 gr/L of water.

. Foliar application:

Wet profusely the leaves in both sides, applying a maximum dose of 0.1% (100 gr of product per 100 L of water) and repeat if necessary.

**PRECAUTIONS**

If mixing with other product, it is recommended to make a preliminary test.
